

## Introducing the EW 40 Wireless Control

EXHAUSTO Inc. in Atlanta, Georgia, is offering a new wireless control, which in conjunction with the RS Chimney Fan, assures proper draft and corrects existing draft problems in almost any chimney.

Lean back, put your feet up and simply enjoy the pleasant, natural warmth from your fireplace or wood-burning stove. That's all there is to it! Thanks to efficient draft through the EXHAUSTO EW40 wireless control, and chimney fan. This unique, complete solution ensures that you make the very most of your fireplace or

wood-burning stove – and of the fuel you use. The easy, reliable control of the chimney draft makes your fireplace or woodburning stove a clean and uncomplicated source of heat. You get all the benefits – such as a healthier, more pleasant indoor climate - without drawbacks such as smoky rooms.

Your advantages include:

- quick and easy lighting
- no smoke or odors in the room
- less dust and soot
- better combustion and fuel economy
- a better, healthier indoor climate
- extra ventilation (in summer, too)
- cheaper installation of the Exhausto Chimney Fan

It is basically all about using the potential of the chimney to the fullest extent - about getting rid of smoke and ash while ensuring the best possible airflow to optimize combustion.

Look forward to pleasant evenings in front of your fireplace or wood-burning stove - with warmth and well-being at your command.

The EW40 is also available with a sensor. This gives you access to a range of other functions and options that not only help to improve the indoor climate, but also increase security.

These features include:

- alarm functions and improved safety (chimney fire alerts, for example)
- an automatic sensor-controlled system to ensure that the chimney fan is switched on at the right time to reduce heat loss from the fire
- a special function that tells you when it is time to add more fuel

The wireless control for the chimney fan is not only easy to fit into your existing surroundings, it is also easy and inexpensive for you to install. The fan is simply mounted on the chimney and linked to the power unit using a pre-fitted supply cable that eliminates the need for a professional electrician.

The wireless control unit itself is both elegant and discreet, so you can position it almost anywhere. If it has to operate over a long distance, you can fit a repeater to boost the signal.

In 1994 EXHAUSTO Inc. earned its ISO 9001 certification.
